	RFP page no. 34 & 35 Annexure-2 (A).	We would recommend to have 2 DIMM slots. Due to the increase in the applications and Secondary OS as linux that will get install on the notebooks, the overall performance of the notebooks may degrade. Hence, it is recommended that the students should have the option to increase the RAM (Memory) as and when needed to improve the overall performance of the notebook in future. Therefore we recommend to have 2 DIMM slots that will give flexibility to the students to upgrade the memory whenever required. Also, if any notebook is with one DIMM slot only, there are very high chances that memory would be soldered and in the event of memory failure, entire motherboard will have to be replaced which would be an additional cost to the student beyond warranty period time. 2 DIMM slots will provide RAM expandability till 16 GB and will improve overall performance of notebook.
